Technical Data: (8GC-60.2Y)

Dimensions and Connections

BITZER Software v7.0.0 rev0

Technical Data

12.03.2024 / All data subject to change.

Technical Data	
Displacement (1450 RPM 50Hz)	185 m³/h
Displacement (1750 RPM 60Hz)	222 m³/h
No. of cylinder x bore x stroke	8 x 75 mm x 60 mm
Weight	350 kg
Max. pressure (LP/HP)	19 / 28 bar
Connection suction line	76 mm - 3 1/8"
Connection discharge line	42 mm - 1 5/8"
Oil type R134a/R407C/R404A/R507A/R407A/R407F	tc<55°C: BSE32 tc>55°C: BSE55 (Option)
Oil type R22 (R12/R502)	B5.2 (Standard)
Motor data	
Motor voltage (more on request)	380-420V PW-3-50Hz
Max operating current	113.0 A
Winding ratio	60/40
Starting current (Rotor locked)	349.0 A D / 513.0 A DD
Max. Power input	62,5 kW
Extent of delivery (Standard)	
Motor protection	SE-B2
Motor protection Enclosure class	IP54 (Standard)
Motor protection Enclosure class Vibration dampers	
Motor protection Enclosure class Vibration dampers Oil charge	IP54 (Standard)
Motor protection Enclosure class Vibration dampers Oil charge Available Options	IP54 (Standard) Standard
Motor protection Enclosure class Vibration dampers Oil charge Available Options Connection suction line	IP54 (Standard) Standard 5,0 dm³ Option
Motor protection Enclosure class Vibration dampers Oil charge Available Options Connection suction line Discharge shut-off valve	IP54 (Standard) Standard 5,0 dm³ Option Option
Motor protection Enclosure class Vibration dampers Oil charge Available Options Connection suction line Discharge shut-off valve Discharge gas temperature sensor	IP54 (Standard) Standard 5,0 dm³ Option Option Option
Motor protection Enclosure class Vibration dampers Oil charge Available Options Connection suction line Discharge shut-off valve Discharge gas temperature sensor Capacity control	IP54 (Standard) Standard 5,0 dm³ Option Option Option 100-75-50% (Option)
Motor protection Enclosure class Vibration dampers Oil charge Available Options Connection suction line Discharge shut-off valve Discharge gas temperature sensor Capacity control Crankcase heater	IP54 (Standard) Standard 5,0 dm³ Option Option Option 100-75-50% (Option) 140 W (Option)
Motor protection Enclosure class Vibration dampers Oil charge Available Options Connection suction line Discharge shut-off valve Discharge gas temperature sensor Capacity control Crankcase heater Oil pressure monitoring	IP54 (Standard) Standard 5,0 dm³ Option Option Option 100-75-50% (Option)
Motor protection Enclosure class Vibration dampers Oil charge Available Options Connection suction line Discharge shut-off valve Discharge gas temperature sensor Capacity control Crankcase heater Oil pressure monitoring Sound measurement	IP54 (Standard) Standard 5,0 dm³ Option Option Option 100-75-50% (Option) 140 W (Option) MP54 (Option), Delta-PII (Option)
Motor protection Enclosure class Vibration dampers Oil charge Available Options Connection suction line Discharge shut-off valve Discharge gas temperature sensor Capacity control Crankcase heater Oil pressure monitoring Sound measurement Sound power level (+5°C / 50°C)	IP54 (Standard) Standard 5,0 dm³ Option Option Option 100-75-50% (Option) 140 W (Option) MP54 (Option), Delta-PII (Option) 86,5 dB(A) @ 50Hz
Motor protection Enclosure class Vibration dampers Oil charge Available Options Connection suction line Discharge shut-off valve Discharge gas temperature sensor Capacity control Crankcase heater Oil pressure monitoring Sound measurement	IP54 (Standard) Standard 5,0 dm³ Option Option Option 100-75-50% (Option) 140 W (Option) MP54 (Option), Delta-PII (Option)

4/4

Semi-hermetic Reciprocating Compressors

Motor 1 = e.g. 4TES-12 with 12 "HP", primary for air-conditioning (e.g. R22,R407C) and air-conditioning with R134a at high ambient temperatures.

Motor 2 = e.g. 4TES-9 with 8 "HP", universal Motor for medium and low temperature application (e.g. R404A, R507A, R407A, R407F) and air-conditioning with R134a

Motor 3 = e.g. 4TES-8, for medium temperature applications and R134a

For more information concerning the application range use the "Limits" button.

Operation modes 4VES-7 to 6FE-44 and 44JE-30 to 66FE-88 with R407F/R407A/R22

CIC = liquid injection with low temperature application, suction gas cooled motor.

ASERCOM certified performance data

The Association of European Refrigeration Component Manufacturers has implemented a procedure of certifying performance data. The high standard of these certifications is assured by:

- * plausibility tests of the data performed by experts.
- * regular measurements at independent institutes.

These high efforts result in the fact that only a limited number of compressors can be submitted. Due to this not all BITZER compresors are certified until now. Performance data of compressors which fulfil the strict requirements may carry the label "ASERCOM certified". In this software you will find the label at the respective compressors on the right side below the field "result" or in the print out of the performance data. All certified compressors and further information are listed on the homepage of ASERCOM.

Condensing capacity

The condensing capacity can be calculated with or without heat rejection. This option can be set in the menu Program \Box Options. The heat rejection is constantly 5 % of the power consumption. The condensing capacity is to be found in the line Condensing cap. (with HR) resp. Condensing capacity.

Data for sound emission

Data based on 50 HZ apllication (IP-units 60 Hz) and R404A if not declared. Sound pressure level: values based on free field area conditions with hemisperhical sound emission in 1 meter distance.

General remarks regarding sound data

Listed sound data were measured under testing conditions in our laboratory. For this purpose the free-standing test sample is mounted on a solid foundation plate and the pipework is connected vibration-free to the largest extend possible. Suction and discharge lines are fixed in a flexible configuration, such that a transmission of vibrations to the environment can be largely excluded. In real installations considerable differences might be observed, compared to the measurements in the laboratory. The airborne sound emitted by the compressor can be reflected from surfaces of the system and this may increase the airborne sound level measured close to the compressor. Vibrations caused by the compressor are also transferred to the system by the compressor feet and piping depending on the damping ratio of the fixings. Thus, the vibrations can induce other components to such an extent that these components contribute to an increase in airborne sound emission. If required, the transfer of vibrations to the system can be minimized by suitable fixing and damping elements.
